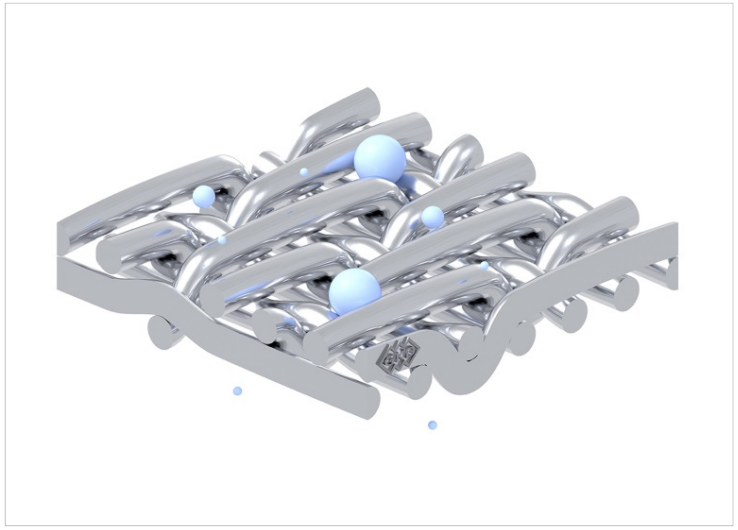
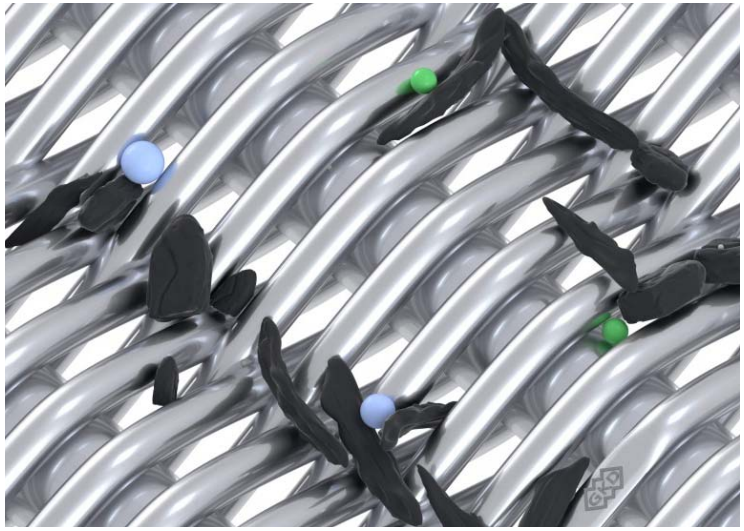
Picture 1-2: Beside municipal waste water treatment operations, sectors that already rely on these filter media also include power plants and shipping enterprises.



Picture 3: The 5-Heddle Atlas Weave developed in 1932 is still in use in the water treatment sector to this day.



Picture 4: Optimized Dutch Weaves from GKD achieve pore sizes in line with the German Institute of Mechanical Process Engineering (IMVT) with selectivity from 6 to 100 µm.

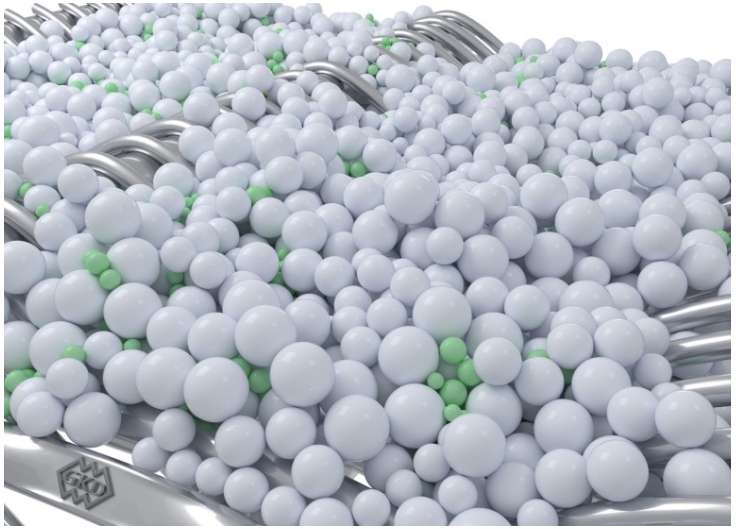
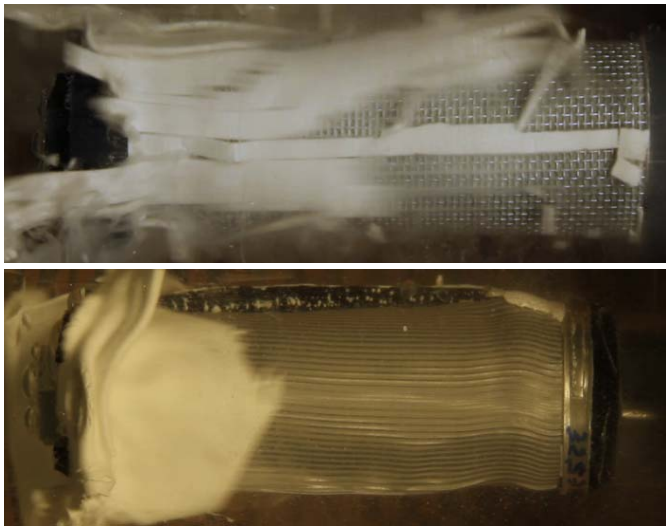
GKD: Innovative filter media for the water industry

High-tech meshes increase ecological and economic efficiency



Picture 5: Boasting pore sizes from 13 to 1,000 µm, Porometric meshes from GKD are also suitable for a large number of treatment processes in the water industry.



Picture 6-7: The excellent cleaning characteristics of Optimized Dutch Weaves (top) and Porometric mesh (bottom) were scientifically certified in independent comparative studies performed by the Karlsruhe Institute of Technology (KIT).
