GKD: A little closer to heaven

Golden metal mesh used as ceiling in the EUMETSAT canteen

Picture 1: The canteen of the European Organisation for the Exploitation of Meteorological Satellites (EUMETSAT) gets its unmistakable face from a lamella-style suspended ceiling made of golden PC-ALU 6010 aluminum mesh from GKD.

Picture 2: The planners opted for a particularly open mesh design in the form of the PC-ALU 6010 mesh from GKD with various warp and weft wire thicknesses.

Picture 3: The striking element in the room is the suspended ceiling, made from 400 square meters of golden aluminum mesh from GKD. Its elements with a blade-type design mimic the appearance of sunshine.
