

Disposal notice

The careful use of natural resources is a significant aspect of our environmental policy. According to the Circular Economy Act, waste avoidance has the highest priority.

As early on as the development stage of new products and production processes, we take into account the use of environmentally friendly materials and are working on constantly reducing production-related waste. Unfortunately, waste-free production is currently not technically possible.

If we are unable to reuse production-related waste ourselves, it is recycled or disposed of by regional waste disposal specialists. Through this process, we are in constant interaction with various waste disposal specialists to ensure the most environmentally friendly disposal possible.

As such, please observe the applicable laws and regulations in your country and the regional requirements and provisions for disposal. If in doubt, contact a waste disposal specialist and ask where your product can be disposed of.
